References and Bibliography for:

A review of the research literature relating to ICT and attainment

and

An investigation of the research evidence relating to ICT pedagogy

Reports to the DfES by the Department of Education and Professional Studies at King's College London.

The studies of the literature for the ICT and attainment and ICT pedagogy reports were carried out simultaneously, and so a joint reference list and bibliography have been produced for both reports. The first literature base shown here is a list of references to which the report specifically refers; these include a wide range of empirical findings and theoretical perspectives. The second is a bibliography which has informed and underpinned our approach and analysis. Much of the latter also describes specific examples relating to ICT and attainment and ICT pedagogy, which could be examined in more detail in a later study. The bibliography begins on page 23.
